

ABSTRACT OF THE DISCLOSURE

5 A balloon holding assembly includes a bottom support and an upper
support each having a top side and a bottom side. A plurality of elongated
vertical supports each has an upper end and a lower end. A plurality of
couplers is attached to each of the upper and bottom supports for
removably coupling each of the upper ends to a bottom side of the upper
support and the lower ends to the top side of the bottom support. A cage
10 is removably positionable over the upper support and extends downwardly
from the upper support. Helium filled balloons may be positioned in the
cage such that the horizontal wall prevents the balloons from floating
upwardly away from the frame.
